                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       6684
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             96
                                                                                                                            Sequence 84, Application US/09404879A

Patent No. 6468546

GENERAL INFORMATION:
APPLICANT: Mitcham, Jennifer L.
APPLICANT: Mitcham, Jennifer L.
APPLICANT: Algate, Paul A.
TITLE OF INVENTION: COMPOSITIONS AND METHODS:
TITLE OF INVENTION: DIAGNOSIS OF OVARIAN CAN
FILE REFERENCE: 210121.462C2
CURRENT APPLICATION NUMBER: US/09/404,879A
CURRENT FILING DATE: 1999-09-24
NUMBER OF CONTRACTOR NO. 2007

The invention relates to a novel method for identifying a compound that modulates T lymphocyte activation. The method comprises contacting a T cell comprising an A-raf-1 or TCPTP/PTPN2 polypeptide with a compound, where the A-raf-1 or TCPTP/PTPN2 polypeptide is encoded by a nucleic acid that hybridises to a nucleic acid encoding a polypeptide having a
                                                                                                                                   Identifying a compound that modulates T lymphocyte activation, useful for monitoring changes in cell surface marker expression, comprises contacting a T cell comprising an A-raf-1 or TCPTP/PTPNZ polypeptide with a compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; T lymphocyte activation; T-cell; A-raf-1; TCPTP/PTDN2; asthma; immunosuppressive; antiasthmatic; antiallergic; antiinflammatory; lymphocyte activation; lymphocyte migration; cytokine production; cell surface marker expression; antibody production; apoptosis; allergy; antibody proliferation; antibody differentiation; hypersensitivity; graft versus host disease; inflammation; gene; ss; TNF-induced protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ACC81105 standard; mRNA; 1892

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-10-627-571-2 (1-188) x ACC81105 (1-1892)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequence selected from two 606-amino acid sequence and a 415-amino acid sequence given in the specification. The method of the invention has cid immunosuppressive, antiasthmatic, antiallergic, and antiinflammatory cactivity. The method is useful for identifying compounds that modulate lymphocyte activation and migration, and for monitoring changes in cell surface marker expression, cytokine production, antibody production, compounds that modulate cytokine production, antibody production, compounds that suppress or activate in and as a compounds that suppress or activate lymphocyte compounds that suppress or activate lymphocyte conduction and digration, e.g. for the treatment of diseases in which modulation of the immune response is desired such as delayed type cand acute and chronic inflammation. Modulators of lymphocyte activation and migration. The present sequence is used in the exemplification of the immune response related T and B cell activation and migration. The present sequence is used in the exemplification of the invention

                                                                                                                                                                                                                                                       The invention relates to an anti-apoptopic gene SSC-S2 and encoded protein. The gene is a positive mediator of tumour growth and metastasis in certain cancer types. The SSC-S2 protein can be expressed by standard recombinant methodology. The SSC-S2 polypeptide is useful as a target for identifying compounds that modulate cancer progression by inhibiting apoptosis, as a target for detecting cancers where this polypeptide is overexpressed, e.g. renal and ovarian cancers, and leukemia. The antibody and antisense oligonucleotide cancer used to treat cancer and to inhibit cancer cell proliferation and/or metastasis. The present sequence represents a human SSC-S2 protein encoding cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                             New SCC-S2 polypeptides and nucleic acids encoding them, useful as target for identifying compounds that modulate cancer progression inhibiting apoptossis, as a target for detecting cancers, or for immunizing animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            373
```

The present invention describes primer sets for synthesising 56 length cDNAs defined in the specification. Where a primer set c (a) an oligo-dT primer and an oligonucleotide complementary to complementary to a polynucleotide which comprises one of

sequences defined in the

specification, where

one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-10-627-571-2 (1-188) x AAH14888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end cCC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence') -end sequence is selected from those defined in the CC specification. The primer sets can be used in antisense therapy and in CC gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAH13633 to AAH19742 represent human cDNA sequences; AAB92446 to AAB95893 CC present human amino acid sequences; and AAH13632 represent CC consent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Local Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 present invention

                                                                                                                                                                                                                                                                                                                                               CC length cDNAs defined in the specification. Where a primer set comprises:

(C (a) an oligo-dT primer and an oligonucleotide complementary to the

CC complementary strand of a polynucleotide which comprises one of the 5602

CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination

CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination

CC of an oligonucleotide comprising a sequence complementary to the

CC complementary strand of a polynucleotide which comprises a 5'-end

CC sequence and an oligonucleotide comprising a sequence complementary to a

CC polynucleotide comprises at least 15 nucleotides and the combination of

CC the 5'-end sequence/3'-end sequence is selected from those defined in the

CC polynucleotide comprises are useful for synthesising polynucleotides,

CC particularly full-length cDNAs. The primers are also useful for the

CC garticularly full-length cDNAs. The primers are also proteins encoded by

CC the full-length cDNAs. The primers allow obtaining of the full-length

CC CDNAs easily without any specialised methods. AAH03166 to AAH13528 and

CC CDNAs easily without any specialised methods. AAH03166 to AAH13528 and

CC CDNAs and AAH1342 represent human cDNA sequences; ABB92446 to AAB95893

CC present human amino acid sequences; and AAH13629 to AAH13632 represent

CC considered to a constant of the constant of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                27-AUG-1999;

CC gastrointestinal-Gen, antiastimatic, antiarreriosclerotic, communomodulator, cerebroprotective, vasotropic, immunosuppressive or cc vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an cc immune disorder, an inflammatory disorder, an inflammatory disorder, an inflammatory disorder and inflammatory disorder. The condition is an cc immune disorders, Hodgkin's lymphomas, haematopoletic tumours, hyper-IgM syndromes, hypohidrotic ectodermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1, hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell curvival, evasion of immune responses, rheumatoid arthritis, inflammatory cowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick cyndrome, stroke, EAR, autoimmune disorders, disorders related to aberrant acute phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, corgan transplant rejection, conditions related to organ transplant cejection, conditions related to organ transplant conditions birth defects, necrotic lesions, wounds, cr jection, disorders related to aberrant signal transduction, problem of the novel association with the NF-kappaB pathway of the commendation and the novel association with the NF-kappaB pathway of the commendation of the organ transplant association with the NF-kappaB pathway of the commendation of the organ transplant association with the NF-kappaB pathway of the commendation of the organ transplant association with the NF-kappaB pathway of the commendation of the organ transplant association with the NF-kappaB pathway of the commendation of the organ transplant association with the NF-kappaB pathway of the commendation of the organ transplant association with the NF-kappaB pathway of the commendation of the organ transplant association with the NF-kappaB pathway of the commendation of the organ transplant a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to the novel association of protein sequences the genes which encode them) to the NF-kappaB pathway. The invention be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antirheumatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.

diseases associated with NF-kappaB pathway.

Claim 1; SEQ ID NO 217; 237pp; English.

CC gastrointestinal-Gen, antiastematic, antiarrents, communomodulator, cerebroprotective, vasotropic, immunosuppressive or confinement of the condition of the conditions and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The conditions is an immune disorder, an inflammatory disorder, an inflammatory disorder and immune disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM conditions, the conditions, the conditions, the conditions, hypothesis, concerns dysplasia, immunodeficiency, viral infections, HTV-1, HTV-1, heapatitis B, hepatitis C, EBV, influenza, viral replication, host cell survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAR, autoimmune disorders, disorders related to hyper compan transplant rejection, conditions birth defects, necrotic lesions, wounds, corgan transplant rejection, conditions related to organ transplant rejection, disorders related to aberrant acute phase responses, paranting disorders, cancers and HIV propagation in cells infected with other viruses. The present sequence is that of a human gene which is subject to the novel association with the NF-kappaB pathway of the conditions of the indexer from Genbank. This invention relates to the novel association of protein sequences the genes which encode them) to the NF-kappaB pathway. The invention be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antirheumatic,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                              US-10-627-571-2 (1-188)
                                                                                                                                                                                                      The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for diagnosing carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma hasociated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA gene sequence. Note: This patent is an equivalent to basic patent
                                                                                                                                                                                Sequence 2034
                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                        Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                            The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (vii) for neutralizing the effect of CAP; (vi) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published

                                                                                                                                                                                                                                                                                                                                             by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 110 genes, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, developental abnormalities and foetal deficiencies, blood disorders, diseases of the immune system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, schizophrenia, arthritis, asthma, psoriasis, sepsis, skin disorders, atherosclerosis, diabetes, cardiovascular disorders, kidney disorders, digestive/endocrine disorders, infections and AIDS. The polypeptides are also useful for identifying their binding partners. The sequences given in ANA97907 to ANA97915 and ANY36223 are used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAX99916 to AAX98029 represent 110 isolated human secreted protein genes. AAY36224 to AAY36727 represent the secreted proteins encoded by the 110 human genes. The genes and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g.
                                                                                                                                                                                                                                                                                                         Sequence 1943 BP;

identification, radiation hybrid mapping or long-range restriction mapping. The polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues immunohistochemistry assays. The polypeptide, polypucleotide, agonist or antagonist may also be used as a food additive or preservative to increase or decrease storage capabilities, fat content or other nutritional components. The present sequence represents cDNA encoding a novel human secreted protein. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at The invention relates to an isolated HKABT24 nucleic acid molecule. The polypeptides, nucleic acids and antibodies are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, for preventing, treating, or ameliorating a medical condition, such as cancer, inflammation and other immune disorders, neurological and blood clotting disorders. The nucleic acids are also useful for chromosome New secreted HKABT24 nucleic acid molecules and polypeptides, useful for preventing, treating, or ameliorating a medical condition, such as cancer, inflammation, immune disorders, neurological and blood clotting Sequence 1943 Claim 1; P-PSDB; ADA11694 seqdata.uspto.gov.uk/sequence.html?DocID=20030055236.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
CC diagnosing, treating or preventing e.g. immune disorders, or inflammatory CC conditions, respiratory disorders, cancers, CNS disorders, or conditions, respiratory disorders, comparisoners, or conditions, respiratory disorders, comparisoners, or considers, or neurodegenerative disorders, or polypeptides comprising an amino acid compositions or antibody fragments that bind to the polypeptides, nucleic cacids encoding the polypeptides, agonists or antagonists that binds to the polypeptide, are useful in preparing diagnostic or pharmaceutical compositions for diagnosing, treating or preventing an e.g. immune compositions for diagnosing, treating or preventing an e.g. immune compositions for conditions (e.g. inflammatory bowel disease, comphritis or Crohn's disease), respiratory disorders (e.g. asthma and compositions or ischaemic brain injury), neurodegenerative conditions or ischaemic brain injury), neurodegenerative constructives or ischaemic brain injury), neurodegenerative conspiratory disorders (e.g. arkbrosochesis or myocarditis). The polypeptides are useful for chromosome identification, chromosome compiling, for controlling gene expression through triple helix formation or antisense DNA or NNA, in gene therapy, for identifying individuals from minute biological samples, in forensic biology, and as hybridization composes. The polypeptides are useful for as molecular weight markers on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADA56241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human secreted polypeptides and polynucleotides, useful for diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or neurodegenerative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21-MAR-2001; 2001US-0277340P.

                                                                                                                                                                                                                                                                                                                                                                                                                                            Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; (cx) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma associated (CA) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of sequence. Note: This patent is an equivalent to basic patent CA gene useful as markers of US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                          Local Similarity:

                                                                                                           The present invention relates to novel DNA and protein sequences which CC are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of CC a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (vi) for diagnosing CC carcinoma; (viii) for neutralizing the effect of CAP; (vii) for treating CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for continuous of the copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of Carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent.

Primer sets for synthesizing polynucleotides, particularly the 5602 fullength cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

Claim 1; SEQ ID NO 4238; 2537pp + Sequence Listing; English

CC length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 complementary strand of a polynucleotide which comprises one of the 5602 cc nucleotide sequences defined in the specification, where the complementary strand of a polynucleotide of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence, where the oligonucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence'3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in the comprises are useful for synthesising polynucleotides, comparationally full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs as allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAH13631 to AAH13627 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent consideration of the co invention invention describes primer sets for synthesising 5602 full-

              The invention relates to a nucleic acid probe for measuring human gene CC expression, comprising any of the 27,400 fully defined nucleotide CC sequences in the specification, or their complements or fragments, and CC encoding at least 8 amino acids of any of the 6888 amino acid sequences (CC hybridises under high stringency conditions to a nucleic acid molecule (CC expressed in human cells or tissues. Also included are a spatially—CC addressable set of single exon nucleic acid probes for measuring human (comprising a plurality of single exon nucleic acid (CC probes cited above, where each of the plurality of probes is separately CC and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a wector comprising at least 8 (CC contiguous amino acids of any of the above—mentioned amino acid (CC sequences (optionally with conservative amino acid substitutions), an constant destring to measure gene expression acid substitutions), an customer desiring to measure gene expression, a method of constant and accordant of providing constant destring to measure gene expression, a method of providing and/or licensing single exon probes or microarrays to constomer desiring to measure gene expression, a method of providing constant gene expression data by subscription, and a computer-readable constant gene expression data by subscription, and a computer-readable constant gene expression data by subscription, and a computer-readable exon probe methods and apparatus are useful in cene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID NO 22914; 80pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 expression analysis. The probes may be used as tools for surveying clissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030194704

                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% or 90% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a nucleotide sequence of the invention.
                                                                                                                                                                                                                                                                                                                                   Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21-JAN-2003;

```

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an enthod of detecting polynucleotides or polypeptides of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of poventing, treating or ameliorating a medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention; methods for the identification of compounds that modulate the expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention CC (ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628 ADC3394). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on NNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human cDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was for the print of the print of specification of the print of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 969 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ftp.wipo.int/pub/published_pct_sequences

       The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide conding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that controlled in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule compressed in human cells or tissues. Also included are a spatially-conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-conditions to a nucleic acid molecule compressed in human cells or tissues. Also included are a spatially-conditions to a nucleic acid molecule expressed in human sense expression, a method of compression comprising at least spatially conditions of the plurality of single exon nucleic acid grobes cited above, an ORF-encoded peptide comprising at least specific contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids specifically to a peptide cited above, an organizated antibody that binds specifically to a peptide cited above, an organizate any appearance of a providing to measure gene expression, a method of providing the substitutions of a customer desiring to measure gene expression, a method of providing control of the substitutions of a single exon probe contends and appearatus are useful in gene customer desiring the substitutions of substitutions and characterising gross alterations in the grobes are used in i
smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Nete: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030194704
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; probe; ss; gene expression; single exon probe; microarray;
